

OVERSIZED ILLUSTRATIVE MATERIAL SAMPLE

This document is designed to supplement the Oversized Illustrative Material handout. It is not an example of a thesis or dissertation in its entirety. The page numbers start on page 11, emphasizing that this is only a section of a document. Each figure is separated by a page of text enabling you to have a feel for how these figures fit within the document.

The second and fourth pages are oversized figures. The first figure, (Figure 1), illustrates how a horizontal figure should be placed. This is the simplest form of oversized figure. In order to create this document in this format, you will need to create a section break, change the paper layout to the correct size, change the paper orientation to landscape and insert your figure or table. Notice, the figure title is along the bottom, underneath the image, and the page number is in the upper right hand corner of the document.

The second figure, (Figure 2), is an example of a vertically placed image (taller than it is wide). In this case, it is necessary to choose landscape paper orientation, add a section break, change the paper size and rotate the image 90 degrees to the left. The figure title has to be aligned under the image in the direction of the image. Therefore, you need to insert a text box under the image. Change the boundaries of the text box to be invisible, insert the text and rotate the text so that it is in line with the image. The page number should not need to be changed. It should be in the right hand side when looking at the page with the binding edge on the left.

For both examples, the margins for the pages should follow the same guidelines as the other margins throughout your document. The left, the right, top and bottom margins should be set to 1". Remember, when working with rotated images, the binding will be on the left hand side when

Figure 1 Oversize Landscape Example

the paper is in landscape orientation.
